## COMMON SEO ISSUES

### Meta Title

✓ The meta title of your page has a length of 77 characters. Most search engines will truncate meta titles to 70 characters.

→ Blazor UI Framework, dotnet in a browser - info, articles, blog and downloads

### Meta Description

✗ The meta description tag is missing from your page. You should include this tag in order to provide a brief description of your page which can be used by search engines. Well-written and inviting meta descriptions may also help click-through rates to your site in search engine results.

#### HOW TO FIX META DESCRIPTION

In order to pass this test you must include a meta-description tag in your page header (<head> section):

```
<head>
<meta name="description" content="type_your_description_here">
</head>
```

Note that in HTML the <meta> tag has no end tag but in XHTML this tag must be properly closed.

Meta description can have any length but a good practice is to keep this under 160 characters (search engines generally truncate snippets longer than this value).
